

# 2024- 2025 Key Priorities

This year we are all working **SUPER** hard to:

## **Becoming confident mathematicians**

We will be acquiring lots of new mathematical knowledge, skills and vocabulary which we will learn to apply in different contexts.

Early mathematicians are working hard in their daily sessions so they can confidently subitise and use their deep number understanding to explore patterns within numbers.

All our teachers will deliver great lessons where learning is accurately modelled. Scaffolds are provided and we are taught to use a range of manipulatives to embed the concrete, pictorial, abstract approach. We listen carefully and apply, practise and refine this new learning in our recorded work. This will enable us to be fluent mathematicians.

## **Writing as an author**

We will be exploring new genres of writing through whole class writing projects using high quality texts. These texts will help us to learn new vocabulary and develop our language skills, so we become confident writers.

We will think carefully about who we want to write for and what we want to write about. We will all be working hard to edit and check our writing using CUPS and ARMS. Early writers will focus on improving fine motor skills and using phonics skills as they commence their journey as writers.

There will be a plethora of opportunities to share our writing with different people. We will celebrate our writing in class and as a school and be proud of our achievements.
